Rafaël Hoek

SOFTWARE ENGINEER

(+32) 470 56 08 22 rafael.hoek@gmail.com github.com/Rafael-Hoek

ABOUT

Backend software engineer with 4 years of experience focused on building and maintaining backend systems and APIs. I work primarily with C#/.NET, cloud platforms (AWS and Azure), and databases.

I enjoy designing practical solutions to real problems and turning requirements into clean applications. I'm also passionate about knowledge sharing and continuously learning new technologies.

EDUCATION

Professional Bachelor in Applied Informatics
UC Leuven-Limburg
09/2019 – 06/2022
Graduated **Cum Laude**.

A-Levels
The English College, Dubai
09/2015 – 06/2017
Mathematics **B**
Physics **B**
Chemistry **B**

EXPERIENCE

Software Engineer
08/2025 – Present
Twipe Mobile Solutions

Backend software engineer building and maintaining core systems for customer-facing newspaper reading apps. Primary focus is the content processing pipeline that converts raw newspaper data into Twipe's proprietary format and the APIs serving it to frontend applications.

TECHNOLOGIES: C#/.NET, SQL, AWS, AUTOMATED DEVOPS PIPELINES

- Analysed and implemented modern authentication/authorization flows for leading news media companies such as Le Telegramme, Neue Pressegesellschaft and Redaktionsnetzwerk Deutschland
- Migrated edition analytics service from legacy .NET Framework to .NET 10, leveraging AI tools for speed while ensuring stability
- Participate in on-call rotation, resolving production incidents outside of office hours

Software Engineer
04/2024 – 10/2025
Aiden Mechelen

Backend software engineer at an ERP and business software consultancy, developing custom solutions on SAP Business One for SME clients. Worked directly with clients to understand workflows and deliver tailored automations.

TECHNOLOGIES: C#/.NET, SAP BUSINESS ONE, APIS, SQL, HANADB

- Designed and implemented a new packing and shipping application for Theo eyewear, connecting with external devices and services
- Led migration from Microsoft TFS to Git on Azure DevOps, leveraging AI to build a Python script automating repository setup both locally and on the cloud
- Introduced secure coding practices: eliminated clear-text passwords, delivered encryption workshop, and established code reviews (four-eyes principle)

TECHNICAL SKILLS

LANGUAGES

C# / .NET · C++ · Python · Elixir · JavaScript · SQL · YAML

FRAMEWORKS & TOOLS

React · Unity · Docker · HANADB

CLOUD & DEVOPS

AWS · Azure · Terraform · Bicep · CI/CD Pipelines · M365

PRACTICES

- SOLID Principles
- Agile / Scrum
- Secure Coding Standards
- Customer Support
- Client-facing Communication
- Mentoring & Knowledge Sharing

Software Engineer

09/2022 – 04/2024

KBC Global Services

Developed internal business applications and process automations as part of the M365 integrations team.

TECHNOLOGIES: C#/.NET, TYPESCRIPT/REACT, MICROSOFT AZURE (YAML + BICEP PIPELINES)

- Built and delivered a large-scale document management system enforcing complex GDPR rules, with automated identification, reporting, and deletion of outdated documents
- Early adopter of new Azure deployment pipelines; provided feedback to infrastructure team and trained other engineers on their use

Game Development Intern

03/2022 – 06/2022

Lugus Studios

Contributed to Liftoff, an independent drone racing game, as a game development intern in a small four-person team.

TECHNOLOGIES: UNITY ENGINE, C#, PHP, DOCKER, AZURE

- Built editor extension and asset pipeline for Unity (now publicly available on GitHub)
- Implemented dynamic flying RC plane mechanics using splines, physics-based smoothing, and speed-dependent rotation
- Designed and prototyped a modernized, Dockerized backend for Liftoff that was later adopted into production with minimal changes
